

# How many Macs can I install Project X<sub>2</sub>7 on?

Project X<sub>2</sub>7 can be installed on any number of computers, but each serial number you purchase can be used to activate the software on only one computer at a time.

## Activating Project X<sub>2</sub>7

After you install Project X<sub>2</sub>7 onto a computer, it will need to be activated with a Serial Number before it can be used. Each serial number can be used to activate only one computer at a time. If you want to activate the software on another computer, you'll need to deactivate it first. See [Moving Project X<sub>2</sub>7 to another computer](#) for details.

You'll temporarily need internet access for the activation so that the software can connect to our server and confirm the serial number.

- When the software is first run it will display a Software License Agreement. Scroll down to read through the license agreement and click the **I Agree** button at the bottom of the page.
- Enter the Serial Number that was given to you and click the **Activate** button. The software will send the serial number to our server for confirmation.
- You'll get a message in green saying that you've successfully activated your license. Click the **Continue** button.

If the software could not be activated with the Serial Number, you'll get a message in red explaining the reason, such as:

- This is not a valid Serial Number — check to make sure you have entered the serial number correctly;
- This is not a Serial Number for Project X<sub>2</sub>7 — make sure you're entering a serial number that can be used to activate Project X<sub>2</sub>7;
- The Serial Number has already been activated — if you want to activate Project X<sub>2</sub>7 on this computer you'll need to deactivate the other installation before activating this one, or purchase another serial number.

## Moving Project X<sub>2</sub>7 to another computer

To move Project X<sub>2</sub>7 from one computer to another, you'll deactivate it on the first computer, then activate the installation on the second computer.

To deactivate the software on one computer and activate it on a different computer, both computers will temporarily need internet access.

- On the first computer, choose Deactivate from the application menu.
- Confirm that you want to deactivate the software by clicking the Deactivate button.
- You'll receive a message in green saying that you've successfully deactivated your license.
- On the second computer, run Project X<sub>2</sub>7, and follow the instructions for [Activating Project X<sub>2</sub>7](#).
